

Lean Genie Advisors

Operational Excellence Case Study

Industry: Manufacturing

Key Result: 27% Production Throughput Increase

Challenge:

The client was facing significant operational bottlenecks, leading to delayed delivery times and increased overhead costs. Manual processes and lack of standardized workflows were hindering growth.

Our Approach:

Lean Genie Advisors implemented a comprehensive Lean transformation program, focusing on Value Stream Mapping, 5S workplace organization, and the elimination of the 8 wastes (TIMWOODS).

The Solution:

- Redesigned the facility layout to optimize flow.
- Standardized high-impact workflows.
- Implemented visual management systems for real-time tracking.
- Trained the internal team on continuous improvement methodologies.

The Outcome:

Within 90 days, the organization achieved a 27% Production Throughput Increase, significantly improving profitability and customer satisfaction scores.
